Year

19 \_\_\_\_

Thank you for the valuable nest record material you have sent. This list is used to inform you about any problems found.

Name: \_\_\_\_\_

**CROSS**

- Observer form ( 7 C-D ) was missing.       Your name was missing from the observer form.
- The nest record cards were not arranged according to the list on the reverse side of the observer form.
- A little more carefulness in filling the nest cards and the forms would be desirable ( the person recording the information is not an ornithologist, s/he may not understand the unclear parts ).
- The sequence of several broods was reported in the section "Clutch sequence". You should also give reasons for your determination ( e.g. ringing, the only pair of the species in the area, etc. )
- There were mistakes in the codes of the following species: \_\_\_\_\_
- The observer number was missing / was incorrect.
- The code of the municipality must be started from the left margin.
- Please report also the national grid coordinates. A map of your area with 10x10 km squares is enclosed.
- The national grid coordinates given \_\_\_\_\_ cannot be within the municipality \_\_\_\_\_
- Of the options given you may **circle only one** , but you circled several in the following: \_\_\_\_\_
- In several boxes you had not circled any options: \_\_\_\_\_
- When reporting BREEDING SUCCESS (successful or unsuccessful), please enclose the particular visit data on which the conclusion is based. ( In the "additional information" you may present useful observations about the nest even if exact dates are missing.)
- If there is information about several nests on the same card (code 3 in "IS THE NEST IN A COLONY? " ), all the nests must have the same date.
- Repeat clutches in the same nest should be reported by a new nest card.
- After the first chick has hatched, please use the breeding stage codes beginning with C instead of using the codes beginning with E.
- Of nests shared with more than one species only eggs and nestlings of the incubating species are to be reported. Those of another species are mentioned in "additional information".
- When using codes C1-C9, give the exact number of young. If the young are not counted precisely please use code C0.

We request for additional information on: \_\_\_\_\_
